

ScanInventory

Flexible and partially automated purchase with the scanning solution from Wiegand

In addition to the classic scanner-based (Kanban) ordering system, ScanInventory offers you many useful functions that further optimize care and logistics processes. You can also benefit from the Wiegand app, which contains many other practical features.

Dynamic order entry: The SmartLogistics software dynamically calculates order quantities based on consumption, taking into account weekdays and holidays, as well as safety stocks. In this way, consumption can be determined efficiently and delivery bottlenecks are avoided.

Software that thinks along: Bestellungen werden automatisch und, sofern gewünscht, direkt pro Lieferant erfasst. Dabei schlägt Ihnen die Software, anhand der dynamischen Bestellmenge, die richtige Bestellmenge vor. Sie legen jedoch die tatsächliche Bestellmenge fest. Weiter werden Sie auf Artikel hingewiesen, welche möglicherweise bei der Erfassung vergessen gingen. Diese Funktionen sparen nicht nur Zeit, sondern helfen Ihnen bei der Eliminierung von Expressbestellungen.

Create orders offline: You can order single, double or any quantity of articles without an internet connection. The app reminds you to send the order as soon as the internet connection reactivated. The system automatically cleans up duplicate orders.

Everything at a glance: Receive important warehouse information directly on your device, thus saving valuable time and being mobile, independent and well informed at all times.

Process optimization: Thanks to ScanInventory, you can design efficient processes for the order entry of articles that require further steps - such as consignment goods or goods for which additional information has to be recorded. With these processes you can map every requirement for the ordering process - also in the operation room - easily and appropriately.

The advantages of ScanInventory at a glance:

- Intelligent scanner processes
- Order in offline mode
- Problem solving directly on site
- Easy relocation
- Further development to cover your needs
- Flexible, user-friendly
- Low installation costs
